## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Highly Autonomous Vehicle competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Highly Autonomous Vehicle production reached approximately 36 K units, with an average global market price of around US\$ 34,722.6 per unit. Highly Autonomous Vehicle refer to vehicles that have reached Level 4 and above in the automated driving technology standards, meaning they can perform driving tasks completely autonomously under specific road and environmental conditions without any driver intervention. In contrast, Levels 0 to 2 still require driver monitoring; Level 3 allows for automated driving under certain conditions but requires driver takeover in emergencies; while Level 5 represents fully autonomous driving capable of operating under all conditions without any driver involvement. The supply chain for Highly Autonomous Vehicle can be broadly divided into upstream, midstream, and downstream segments. The upstream segment includes the supply of core hardware and foundational technologies, such as high-performance chips (CPU, GPU, AI accelerators), LiDAR, millimeter-wave radar, cameras, inertial navigation systems, high-precision mapping and positioning systems, automotive-grade sensors, and vehicle-in-the-loop control chassis. These components form the hardware foundation for advanced automated driving. The midstream segment primarily comprises automakers and solution providers, who integrate the upstream hardware and software to implement highly automated driving functions through perception, decision-making, control algorithms, and in-vehicle operating systems. Representative companies include traditional automakers, emerging electric vehicle manufacturers, autonomous driving technology companies, ride-sharing platforms, and commercial vehicle manufacturers. The downstream segment involves the deployment of applications and services, as well

as the gradual penetration of highly automated passenger vehicles into the consumer market. It also includes operators, ride-sharing platforms, and aftermarket maintenance, repair, and insurance services. The entire industry chain is characterized by a dual-driver model of technology and capital, deepening cross-sector collaboration, and a gradual expansion of application scenarios. The single-line production capacity of Highly Autonomous Vehicle is 3.3 to 3.8 K units per year, the average gross profit margin was 16.2%.

The global Highly Autonomous Vehicle market size was estimated at USD 1250.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.60% during the forecast period.
