## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Highway Solid De-icer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Highway solid de-icers are granular or pelletized chemicals applied to roads, bridges, and pavements to melt ice and snow or prevent their formation. Unlike liquid brines (pre-wetting agents), solid de-icers are spread directly onto surfaces and work by lowering the freezing point of water. They are widely used in winter road maintenance due to their ease of storage, long shelf life, and effectiveness in extreme cold.

The global Highway Solid De-icer market size was estimated at USD 2978.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.40% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Highway Solid De-icer market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
