## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hinged Shaft Collar competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Hinged shaft collar is a type of mechanical axial positioning and locking element designed with a single-sided hinge structure, suitable for scenarios with high requirements for installation convenience and shaft surface protection. Its structure consists of an integral annular clamping body and a hinged connection on one side, and the other side is fastened by screws to achieve a firm clamping of the shaft by the collar. It can be opened and closed without complete disassembly, which greatly improves the efficiency of maintenance and replacement. This collar is widely used in packaging equipment, food processing lines, automation modules, medical equipment, transmission systems and light-load shaft end limit devices. It is particularly suitable for working conditions where limited space and installation from the shaft end cannot be inserted. Common materials include anodized aluminum alloy, stainless steel and carbon steel, and the surface treatment is mainly for corrosion protection and enhanced mechanical strength. Compared with traditional two-piece or one-piece collars, hinged type is more flexible and safer in small devices, avoiding the risk of accessories slipping or misinstallation due to disassembly.

The global Hinged Shaft Collar market size was estimated at USD 90.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
