Abstracts

Hip abduction positioners are specialized medical devices designed to maintain proper hip alignment and prevent adduction in patients post-surgery, particularly following total hip arthroplasty or hip fracture repairs, as well as in cases of congenital hip dysplasia or neuromuscular conditions. These devices, which include pillows, braces, and wedges, function by creating a physical barrier between the legs to keep the hips in an abducted and neutral position, reducing the risk of dislocation, promoting healing, and ensuring optimal surgical outcomes. Their design prioritizes patient comfort, adjustability, and ease of use while adhering to medical standards for postoperative care and rehabilitation protocols.

The global Hip Abduction Positioners market size was estimated at USD 126.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
