Abstracts

Hip articular prostheses, also known as hip implants or hip replacement systems, are medical devices designed to surgically replace a damaged or diseased hip joint, typically due to conditions like osteoarthritis, rheumatoid arthritis, avascular necrosis, or traumatic injury. These prostheses consist of components that replicate the natural ball-and-socket structure of the hip, commonly including an acetabular cup (often with a liner), a femoral stem, and a femoral head, which may be constructed from materials such as metal alloys, ceramics, or highly cross-linked polyethylene to optimize durability, biocompatibility, and wear resistance. The market for these devices is driven by an aging global population, rising prevalence of degenerative joint diseases, advancements in implant materials and surgical techniques (such as minimally invasive procedures), and increasing patient demand for improved mobility and quality of life. Key players include multinational medical technology companies like Zimmer Biomet, Stryker, Johnson & Johnson (DePuy Synthes), and Smith & Nephew, who compete on innovation, product portfolio breadth, clinical outcomes, and surgeon training programs. Regional demand varies, with developed markets (North America and Europe) showing high adoption rates due to established healthcare infrastructure and reimbursement policies, while emerging economies (Asia-Pacific, Latin America) are experiencing rapid growth fueled by expanding access to healthcare, rising disposable incomes, and growing awareness of treatment options. Regulatory oversight, such as FDA approvals in the U.S. and CE marking in Europe, plays a critical role in market entry and product evolution, with an increasing emphasis on personalized implants, robotic-assisted surgeries, and value-based healthcare models that prioritize long-term performance and cost-effectiveness.

The global Hip Articular Prostheses market size was estimated at USD 4350.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.65%

during the forecast period.
