Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hiperco 27 competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Hiperco 27 production reached approximately 1200 tons, with an average global market price of around US\$ 70 per kg. Hiperco 27 is a soft magnetic alloy composed primarily of cobalt (~27%), iron, and a small amount of chromium, designed to offer high magnetic saturation (comparable to Hiperco 50) along with superior ductility and toughness. It is valued for its ability to maintain magnetic performance under mechanical stress and elevated temperatures, making it ideal for use in electric motors, generators, magnetic bearings, and relays. While it has slightly lower magnetic permeability and higher coercivity than Hiperco 50, its enhanced mechanical resilience makes it well-suited for applications requiring both magnetic efficiency and structural durability.

The global Hiperco 27 market size was estimated at USD 83.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
