Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hiperco Alloys competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Hiperco alloys are high-performance soft magnetic iron-cobalt alloys known for their exceptionally high magnetic saturation (up to 2.4 Tesla), high permeability, and low core loss. Composed primarily of iron and cobalt, with minor additions like vanadium or niobium depending on the grade, they are engineered to deliver superior magnetic performance in demanding applications. The most common grades, such as Hiperco 50 and Hiperco 27, balance magnetic strength with mechanical workability. These alloys are widely used in aerospace, defense, power generation, and high-efficiency electric motors, where compact size and high magnetic output are critical design requirements.

The global Hiperco Alloys market size was estimated at USD 628.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Hiperco Alloys market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
