Abstracts

Hitch and trunk bike racks are specialized automotive accessories designed to securely transport bicycles externally on a vehicle, with two primary types: hitch-mounted racks attach to a vehicle's trailer hitch receiver and typically carry multiple bikes in a stable, elevated position, often with features like tilt-down access to the trunk; trunk-mounted racks use straps and hooks to attach directly to a vehicle's trunk, hatchback, or rear door, offering a more affordable and versatile solution for occasional use, though generally supporting fewer bikes and requiring more careful installation to avoid damage to the vehicle or bicycles. Both types are engineered to maximize bike capacity while ensuring safety, ease of loading, and compatibility with various vehicle models and bicycle frame designs.
