Abstracts

Human milk oligosaccharides (HMOs) are the third most abundant component in breast milk and one of the most important components in breast milk. It is precisely because of the existence of HMOs that breastfeeding has become the gold standard for infant nutrition. The latest research shows that HMOs can effectively enhance the benefits of breastfeeding, such as strengthening the immune system and promoting healthy brain development. In addition, HMOs can promote intestinal development, improve intestinal resilience, and promote the balance of intestinal microbiota. HMO is particularly important in improving the health and nutritional needs of infants and young children. Since infant formula is mainly made from cow and goat milk, and the content of HMO in cow and goat milk is very low, adding HMO to infant formula is more in line with breast milk nutrition and can better protect the healthy growth of babies.

The global HMO Infant Formula market size was estimated at USD 3860.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.80% during the forecast period.
