Abstracts

Heated Tobacco Device (HTD) is the core device of heated tobacco products (HTPs). It heats tobacco rather than burns it by precise temperature control, aiming to reduce the generation of harmful substances. Market drivers: Increased health awareness: Consumers have a deeper understanding of the harmfulness of traditional tobacco products, prompting them to seek relatively healthy alternatives. Heat-not-burn tobacco heaters significantly reduce harmful substance emissions by heating rather than burning tobacco, which is in line with the trend of healthy consumption. Changes in regulatory policies: Strengthened regulation of tobacco products worldwide and increased restrictions on traditional tobacco products have provided market space for heat-not-burn tobacco heaters. For example, some countries have included heat-not-burn tobacco products in the scope of regulation, but have fewer restrictions on them than traditional tobacco. Technological innovation: Improvements in heating technology, intelligent equipment, and diversified flavors have improved user experience and attracted more consumers.

The global HNB (Heat-not-burn) Tobacco Heater market size was estimated at USD 4655.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 20.10% during the forecast period.
