Abstracts

Hold baggage X-ray scanners are security screening systems designed for the automated inspection of checked luggage at airports, transportation hubs, and high-security facilities, utilizing penetrating X-ray radiation to generate detailed images of the contents inside closed bags and containers. These systems employ advanced technologies such as dual-energy imaging, computed tomography (CT), and automated threat detection algorithms to identify prohibited items?including explosives, weapons, and contraband?while minimizing false alarms and optimizing throughput. Key components typically include conveyor systems, radiation sources, detectors, and sophisticated image processing software, all integrated to ensure compliance with international aviation security standards set by organizations like ICAO and TSA. The primary function is to enhance security by non-invasively examining luggage for potential threats, thereby safeguarding passengers, crew, and infrastructure without requiring physical inspection in most cases.

The global Hold Baggage X Ray Scanner market size was estimated at USD 650.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
