Abstracts

A holeless hydraulic elevator, also known as a machine-room-less (MRL) hydraulic elevator, is a vertical transportation system that utilizes hydraulic technology without requiring a traditional piston-cylinder assembly extending below the pit floor. Unlike conventional hydraulic elevators that rely on a hole drilled into the ground to accommodate the plunger, this design employs telescopic pistons, side-acting hydraulic cylinders, or roped hydraulic systems to lift the cab, eliminating the need for extensive excavation or deep pits. This configuration reduces installation complexity, minimizes structural modifications to buildings, and is particularly advantageous in retrofitting projects, low-rise buildings, or settings with space constraints, while still delivering the smooth ride, reliability, and cost-effectiveness associated with hydraulic elevator systems.

The global Hole Less Hydraulic Elevator market size was estimated at USD 850.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
