Abstracts

Hollow Cup DC Motors, also known as coreless or ironless DC motors, are a type of electric motor characterized by the absence of an iron core within the rotor. Instead of a traditional iron core with windings, these motors have a hollow, cylindrical or cup-shaped rotor that is constructed without an iron core. This design offers several advantages, including reduced inertia, high power-to-weight ratio, and smoother operation. Hollow cup DC motors are used in various applications, such as robotics, precision instruments, and portable devices. Hollow cup DC motors are compact electric motors with a growing market demand, particularly in automation, medical devices, and consumer electronics. Their small size, high efficiency, and low noise characteristics make them widely used in various specific applications such as drones, smart home devices, and medical equipment. In the future, with the ongoing growth of the automation and electronics industries, hollow cup DC motors are expected to continue to thrive, especially in the fields of robotics and smart manufacturing.

The global Hollow Cup DC Motors market size was estimated at USD 569.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
