Report Overview

Hollow Glass Beads are a new type of material developed in recent years with wide application and excellent performance. The main component of this product is borosilicate, hollow spheres with a particle size of 10-250 microns and a wall thickness of 1-2 microns. The product has the advantages of light weight, low thermal conductivity, high strength and good chemical stability. After special treatment, it has lipophilic and hydrophobic properties, and is very easy to disperse in organic materials such as resins. Hollow Glass Beads have excellent physical and chemical properties. Adding them will reduce the density of the material, and at the same time improve the stiffness, strength, and insulation properties of the material. Hollow glass microspheres are widely used in industry, construction, national defense and other industries.
