Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hollow Locking Screw competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Hollow locking screws are hollow-structured orthopedic internal fixation implants with internal channels for precise insertion along a guide wire. They are commonly used in fracture reduction and fixation (such as femoral neck fractures and ankle fractures) or ligament reconstruction surgeries. The screw head has locking threads, which can form an angularly stable structure with locking plates or intramedullary nails, offering advantages such as precise guidance, minimally invasive operation, and strong biomechanical stability. The upstream of the industry chain includes suppliers of medical-grade titanium alloys (such as Ti-6Al-4V) or stainless steel rods, high-precision deep-hole drilling and cold heading equipment, surface treatment (such as sandblasting and acid etching), and guide wires. The midstream consists of orthopedic companies with Class III medical device registration certificates, requiring mastery of core processes such as hollow forming, heat treatment, cleanliness control, and sterilization validation. The downstream primarily targets hospital trauma orthopedics departments, sports medicine departments, and orthopedic centers, entering clinical applications through distributors, GPO centralized procurement, or direct sales. In 2024, the global production of hollow locking screws was approximately 3 million units, with an average market price of approximately US\$120 per screw. The gross profit margin of major manufacturers is 52%?70%, and the annual production capacity of a single line is 100,000 units.

The global Hollow Locking Screw market size was estimated at USD 360.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00%

during the forecast period.
