Abstracts

Hollow section products, often referred to as structural hollow sections (SHS), are cold- or hot-formed steel, aluminum, or composite profiles with enclosed cross-sections, including circular (CHS), rectangular (RHS), and square (SHS) hollow shapes. These products are integral to modern construction, infrastructure, and manufacturing due to their high strength-to-weight ratio, torsional resistance, and aesthetic versatility. They are used in applications ranging from building frames, bridges, and support structures to machinery, automotive components, and architectural designs. The versatility in shape, material grade, and surface treatment (e.g., galvanized, painted) allows hollow sections to meet diverse engineering requirements, offering advantages in load distribution, fabrication ease, and design flexibility over open-section alternatives like I-beams or channels.

The global Hollow Section Products market size was estimated at USD 42300.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
