### Report Overview

Wireless home broadband solutions use wireless devices, such as a router or a dongle, for connecting to the internet via Wi-Fi technology. These devices, unlike fixed line connections, use a cellular 3G or 4G technology at the backhaul of their network to provide internet connection to end-users. The device uses a subscriber identity module (SIM) card for authentication and for encoding and decoding the data to be uploaded or downloaded.

One trend in the market is pay-as-you-go business model. The pay-as-you-go business model by cellular providers is a type of mobile phone service subscription through which SIM owners can pay in advance for data and can add more data as and when needed, which can be daily, weekly, or monthly.
