Abstracts

An evaporative humidifier, also known as a wick humidifier, is a type of humidification device that utilizes a natural process of evaporation to add moisture to the air; it operates by drawing dry air through a moistened wick or filter via a fan, allowing water to evaporate and disperse as a cool mist, which increases humidity levels without heating the water or producing white dust, making it energy-efficient, cost-effective, and suitable for improving indoor air quality in residential settings, particularly in dry climates or during winter months.
