Abstracts

A home solar power system is a renewable energy setup designed for residential use, consisting primarily of photovoltaic (PV) panels that convert sunlight into electricity, an inverter that transforms the generated direct current (DC) into usable alternating current (AC), a mounting structure to secure the panels (typically on rooftops or ground-mounted), and often includes energy storage solutions such as batteries to store excess power for later use, along with monitoring systems to track energy production and consumption. These systems can be grid-tied, allowing homeowners to sell surplus energy back to the utility grid, or off-grid, providing complete energy independence, and are increasingly integrated with smart home technologies for optimized energy management.

The global Home Solar Power System market size was estimated at USD 23800.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 16.50% during the forecast period.
