### Report Overview

A Home Standby Generator is a backup power system designed to automatically provide electricity to a home in the event of a power outage. These generators are typically connected to the home's electrical system and powered by natural gas, propane, or diesel. Growing intensity and frequency of prolonged power disruptions on account of grid inadequacy, deteriorating weather conditions heighten consumer awareness of power reliability concerns. Home Standby Generator delivers power directly to home's electrical system, backing up entire home or just the most essential items when the municipal power is out. New energy such as wind power in the United States accounts for a large proportion of power supply (more than 70%), but in severe weather conditions, the energy supply is unstable, and the power storage in the United States has not reached the level of South Korea, resulting in power outages due to tight power supply.

The global Home Standby Generators market size was estimated at USD 2151 million in 2023 and is projected to reach USD 4828.32 million by 2032, exhibiting a CAGR of 9.40% during the forecast period.

North America Home Standby Generators market size was estimated at USD 654.45 million in 2023, at a CAGR of 8.06% during the forecast period of 2024 through 2032.
