## Abstracts

A honeycomb seedling tray insert is a tool for seedling cultivation, consisting of paper pots connected in a chain-like structure. The paper used in these pots is specially processed and, despite having no bottom, holds the soil securely within, thanks to the roots of the seedlings. This design facilitates easy transplanting as the entire paper pot, which is biodegradable, can be planted directly into the soil, reducing labor and minimizing transplant shock. Additionally, the paper material allows for efficient water and air exchange between the pots, promoting the growth of uniform seedlings. Initially developed primarily for green onions, honeycomb seedling tray inserts have evolved to accommodate a broader range of crops. Versions with wider spacing between the pots are now available, making them suitable for leafy greens, flowers, and other plant varieties.

The global Honeycomb Seedling Tray Insert market size was estimated at USD 142.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
