Abstracts

The cellular vibration isolation optical table is an optical equipment support system used in laboratory or industrial environments. It usually consists of a platform with many small holes, called a honeycomb structure, which can be adjusted by compressed air or liquid to provide stable support and vibration isolation. The main purpose of this kind of platform is to provide a stable foundation to ensure the working stability and accuracy of precision optical equipment such as laser systems, optical microscopes, spectrometers, etc. Through the design of the honeycomb structure, it can effectively isolate external vibration, vibration and noise, thereby preventing these interferences from affecting optical equipment. Cellular vibration isolation optical platforms usually have a height-adjustable function, and the height and level of the platform can be adjusted according to experimental needs to adapt to different experimental scenarios and equipment requirements. It is widely used in scientific research laboratories, optical manufacturing, precision processing and other fields that require high-precision optical equipment support.

The global Honeycomb Vibration Isolation Optical Table market size was estimated at USD 245.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
