Abstracts

Hooked steel fibers are a type of reinforcing material used in concrete to enhance its strength and durability. They are typically made from carbon or stainless steel and have a unique shape with small hooks at the ends. These hooks help to anchor the fibers within the concrete matrix, providing better bonding and reinforcement. The global steel fiber market, including the market for hooked steel fibers, has been experiencing growth in recent years. This can be attributed to the increasing demand for stronger and more durable concrete in various construction and infrastructure projects worldwide. Factors such as urbanization, population growth, and the need for sustainable and resilient infrastructure have contributed to the demand for reinforced concrete solutions. Hooked steel fibers, with their ability to improve crack resistance and post-crack strength in concrete, have gained popularity as a reinforcement material in these applications. The market for hooked steel fibers is influenced by factors such as construction activities, infrastructure development, and government investments in different regions. Market dynamics can also be impacted by factors like material costs, technological advancements, environmental regulations, and the overall economic climate.

The global Hook Steel Fiber market size was estimated at USD 2110.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
