Abstracts

Hopper silos are a type of storage structure used for storing bulk materials such as grain, seeds, and animal feed. These silos have a conical bottom (hopper) which allows for easy and complete unloading of the stored material. The design of the hopper promotes the flow of the material towards the center, making it easier to empty the silo. Hopper silos are commonly used in agriculture where the stored materials need to be unloaded and transported regularly. They are typically constructed from steel or concrete and can vary in size from small on-farm silos to larger industrial silos. The conical bottom design is also advantageous for certain types of materials that may have a tendency to bridge or stick together.

The global Hopper Silos market size was estimated at USD 781.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
