Abstracts

Horizontal Air Curtain is an air curtain device that forms an airflow barrier through horizontal air supply. It is mainly used to block the exchange of indoor and outdoor air and maintain the temperature, air quality and sanitary conditions of the indoor environment. Unlike traditional top-mounted air curtains, horizontal air curtains are usually installed on the door frame or the side of the entrance. They separate the indoor and outdoor spaces through lateral airflow, effectively preventing the flow of hot and cold air, the entry of dust, insects and odors, while maintaining the convenience of passage and the openness of vision.

The global Horizontal Air Curtain market size was estimated at USD 396.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.30% during the forecast period.
