## Abstracts

Cigarette paper is simply rolling paper that is cut into sections that are the ideal size for assembling a cigarette. This strong tissue paper is formulated to provide enough support to contain the loose tobacco during the rolling process, but porous enough to make it possible to control the speed of burning that takes place as the cigarette is smoked. The cigarettes market size is projected to increase by USD 141.91 billion and the market size is estimated to grow at a CAGR of 3.75% between 2022 and 2027. Increasing demand for e-cigarettes is the key trend driving the growth of the market. E-cigarettes are electronic devices that stimulate the smoking experience. These operate by heating a liquid and creating an aerosol that the user inhales. The demand for e-cigarettes is currently high due to their wide penetration in various markets and is expected to increase during the forecast period due to new product launches. High regulation of cigarette smoking is the major challenge to the growth of the market. The rise in various types of taxes such as excise, value-added tax (VAT), and tobacco tax in North America, APAC, and Europe is a major concern for market players as it negatively impacts margins and profitability. For example, certain state laws prohibit the sale of herbal tobacco to consumers under the age of 18 (19 in Alabama, Alaska, and Utah), and retailers can charge USD 300 to USD 1,000 for violating the law.

The global Horizontal Cigarette Paper market size was estimated at USD 913.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
