## Abstracts

A CNC horizontal machining center is a horizontal machine tool that is controlled by a CNC system and has an automatic tool changer. It can perform multiple processes on multiple surfaces of a workpiece in one clamping. It combines CNC technology, automation technology, precision mechanical design and advanced tool technology to achieve efficient and high-precision machining. The spindle and worktable of a horizontal machine tool are arranged horizontally. This layout is conducive to the processing of large, heavy or long workpieces because these workpieces are more stable in the horizontal direction. HMC usually has multiple CNC axes (such as X, Y, Z axes and possible A, B, C rotation axes). These axes can achieve multi-axis linkage under the control of the CNC system to complete complex spatial surface processing. The CNC horizontal machining center is equipped with an automatic tool changer (ATC, Automatic Tool Changer), which enables the machine tool to automatically change tools during the processing process without manual intervention, greatly improving processing efficiency and flexibility.

The global Horizontal Cnc Machining Center Hmc market size was estimated at USD 7306.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
