Abstracts

Horizontal drum cutters, also known as milling drums or cutting drums, are heavy-duty hydraulic attachments primarily mounted on excavators or specialized carriers, designed for precise rock cutting, trenching, surface leveling, and material excavation in mining, construction, and civil engineering projects. These tools consist of a rotating drum equipped with carbide-tipped cutting tools or picks that fragment rock, concrete, or other hard materials through a milling action, offering advantages over traditional methods like blasting or hammering by reducing vibrations, increasing control, and improving efficiency in selective excavation and profile shaping.
