Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Horizontal Parting Cold Core Box Shooter competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global horizontal parting cold core box shooter production reached approximately 1800 units, with an average global market price of around K US\$ 128.7 per unit. A horizontal parting cold core box shooter is a cold core box core - making equipment with a horizontally - parted mold structure. It injects liquid resin sand at high speed into the core box through horizontal mold opening and closing, and the resin sand is rapidly cured at room temperature by a catalyst to form high - precision sand cores. Its core feature is that the horizontal parting enables the side and bottom of the sand core to be demolded simultaneously, making it particularly suitable for manufacturing complex sand cores with relatively large length, width, or requiring horizontal core extraction (such as engine block water jacket cores and hydraulic valve block cores). It has advantages such as a large mold - opening stroke, convenient core extraction, and high mold - installation stability, and is widely used in the precision casting core - making processes of industries such as automotive parts, construction machinery, and hydraulic equipment.

The global Horizontal Parting Cold Core Box Shooter market size was estimated at USD 232.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
