The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Horizontal Parting Core Shooting Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global horizontal parting core shooting machine production reached approximately 3500 units, with an average global market price of around K US\$ 132.2 per unit. A horizontal parting core shooting machine is a core - shooting equipment with a horizontally - parted mold structure. It forms sand cores efficiently by opening and closing the mold horizontally, utilizing compressed air to inject uniformly mixed resin sand at high speed into a horizontally - placed core box, which then solidifies into the desired sand core shape. This type of machine is particularly suitable for manufacturing long, wide - cross - section, or horizontally - extracted complex sand cores (such as engine block water jacket cores and hydraulic valve block cores). It features a large mold - opening stroke, convenient core extraction, and high mold - installation stability, and is widely used in the precision casting core - making processes of industries such as automotive parts, construction machinery, and hydraulic equipment.

The global Horizontal Parting Core Shooting Machine market size was estimated at USD 463.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
