Abstracts

The horizontal plowshare mixer is a powder mixing equipment with a wide range of adaptability and uses. The horizontal plowshare mixer is mainly composed of a transmission part, a horizontal cylinder, a plowshare shaft, a flying knife group, a discharge valve, a paint spraying device (or a liquid spraying device), etc. The transmission part includes a cycloidal pinwheel reducer with a motor, a coupling, etc., which is used to convert the movement of the motor into the required speed and torque, and transmit it to the complex knife shaft. The working principle of the horizontal plowshare mixer mainly depends on the synergy of the plowshare and the flying knife. When the machine is started, the plowshare rotates with the main shaft, causing the material to turbulently move radially along the cylinder arm. At the same time, the radial material flows through the flying knife group along the line, is scattered by the high-speed rotating flying knife, and is constantly replaced and compounded, so that the material can be mixed evenly in a relatively short time.

The global Horizontal Plowshare Mixer market size was estimated at USD 87.6 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.90% during the forecast period.
