Abstracts

The horizontal single-axis manipulator is a simple-structured automation equipment that uses a single-axis horizontal motion to perform tasks such as material handling, assembly, and sorting. It usually has only one motion axis and can perform linear motion in a horizontal plane, which is suitable for occasions that require horizontal operation. Because of its compact design, small footprint, and simple control, it is widely used in automated production lines, warehousing, electronic manufacturing and other industries. The advantages of this type of manipulator are low cost, simple structure, and fast response speed. It is suitable for performing basic tasks with high precision and high repeatability. However, due to its only single-axis motion, its functions are relatively limited and it cannot complete complex multi-directional operation tasks.

The global Horizontal Single-Axis Manipulator market size was estimated at USD 236.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
