Abstracts

Hormonal contraception refers to a class of birth control methods that use synthetic hormones?either progestin alone or a combination of progestin and estrogen?to prevent pregnancy by suppressing ovulation, thickening cervical mucus to block sperm, and thinning the uterine lining to inhibit implantation. These methods are available in various forms, including oral contraceptive pills, transdermal patches, vaginal rings, injectables, subdermal implants, and hormonal intrauterine devices (IUDs), offering users flexibility in administration, duration of action, and reversibility. While primarily designed for pregnancy prevention, hormonal contraception is also prescribed for non-contraceptive benefits such as managing menstrual disorders, reducing acne, and alleviating symptoms of polycystic ovary syndrome (PCOS) or endometriosis.

The global Hormonal Contraception market size was estimated at USD 17500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
