## Abstracts

The working principle of the horse racing timing system is based on advanced electronic technology and sensor technology. At the start of the race, the transmitter is activated and starts sending signals. When the horse passes through the detection ring on the track, the receiver receives the signal and converts it into time data. This data is then sent to the server for processing and analysis. Ultimately, information such as race time and ranking is displayed on the screen in real time for the audience and referees to refer to.

The global Horse Racing Timing System market size was estimated at USD 497.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.40% during the forecast period.
