Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Horticulture Mulch Films competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Global sales of horticulture mulch films reached 650,000 tons in 2024, with an average selling price of US\$2,355 per ton. Horticulture Mulch Films are plastic films used in agricultural and gardening practices to cover the soil surface around plants. These films serve multiple purposes, enhancing plant growth and health by providing a protective barrier and improving the overall cultivation environment. The main raw material is linear low-density polyethylene (LLDPE) or low-density polyethylene (LDPE) resin, accounting for approximately 80%–85% of the total cost. Depending on color or functional requirements, 3%–10% of black masterbatch, silver-gray masterbatch, anti-drip agents, antioxidants, and other additives are added. Processing electricity consumption, labor, and depreciation account for 5%–10% of the total cost. Therefore, resin prices directly determine the price of horticulture mulch films; the more complex the functional layers and the thicker the film, the higher the unit cost.

The global Horticulture Mulch Films market size was estimated at USD 1536.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
