Abstracts

Host cell proteins (HCPs) are an inevitable impurity of biopharmaceuticals, regardless of whether they are produced by recombinant fermentation or extracted from natural sources. Even after multiple sophisticated purification steps, HCPs may remain or co-purify. They represent a heterogeneous variety of different proteins that need to be quantified in the drug substance and in intermediates from the downstream purification process. HCP analysis is a test to determine the concentration of host cell proteins in samples from downstream purification and drug substance.

The global Host Cell Proteins (HCPs) Analysis market size was estimated at USD 238.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
