Abstracts

Hot air rework stations are specialized electronic tools used for soldering and desoldering surface-mount components (SMDs) on printed circuit boards (PCBs) by directing a controlled stream of heated air, enabling precise, non-contact rework that minimizes thermal stress and damage to sensitive parts and surrounding circuitry. These devices typically feature adjustable temperature and airflow settings, digital displays for accuracy, and a variety of nozzle attachments to accommodate different component sizes and types. They are essential in electronics manufacturing, repair, rework, and prototyping, particularly as miniaturization and component density increase the complexity of PCB assemblies.

The global Hot Air Rework Stations market size was estimated at USD 350.2 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
