Abstracts

Hot Air Sealing Machines are specialized machines used in the garment industry to bond the seams of fabrics, particularly in waterproof or water-resistant garments. These machines use controlled hot air to melt a sealing tape or film, which is then applied over the stitched seams to prevent water or other elements from penetrating. The heat causes the tape to fuse with the fabric, creating a durable, watertight seal. This process is crucial in the production of outdoor gear, sportswear, and protective clothing, where waterproofing and seam durability are essential. Hot air seam sealing machines are known for their precision, efficiency, and ability to handle various fabric types.

The global Hot Air Sealing Machine market size was estimated at USD 99.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
