Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hot Cell Manipulator competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Hot Cell Manipulator is a remote operation device designed for high-radioactivity environments. It is usually integrated inside a shielded hot chamber. The robotic arm structure is constructed of radiation-resistant materials, equipped with multi-degree-of-freedom joints and precision end effectors (such as grippers, tool adapters, etc.), combined with a master-slave control system or pre-programmed automatic control technology. Under the monitoring of lead glass windows or external cameras, it can achieve remote loading and unloading, precise positioning, complex operations and safe handling of high-radioactivity materials (such as spent fuel assemblies and radioactive samples). At the same time, multiple sealing structures and negative pressure ventilation systems are used to prevent radioactive contamination leakage. It is a key equipment for ensuring the radiation safety of personnel in nuclear fuel cycle facilities, radioactive waste treatment centers and nuclear research laboratories.

The global Hot Cell Manipulator market size was estimated at USD 78.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
