The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hot-dip Aluminum-silicon Coated Steel competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Hot-dip Aluminum-silicon Coated Steel production reached approximately 4340 k tons, with an average global market price of around US\$1120 per ton. Hot-dip aluminum-silicon coated steel (also known as aluminized steel with Al-Si coating) is a high-strength steel substrate that undergoes a hot-dip coating process to apply a protective aluminum-silicon alloy layer, typically around 90% aluminum and 10% silicon. This metallurgical bond coating effectively prevents surface oxidation and decarburization during high-temperature heat treatments, enhances corrosion resistance, and enables efficient forming. Widely used in hot stamping and press-hardening processes for automotive structural components, it helps maintain surface integrity and improves tooling life. The upstream of hot-dip aluminum-silicon coated steel mainly includes basic raw materials such as iron ore, bauxite, and coking coal, as well as aluminum and silicon alloys used for coating. The downstream is mainly used in industries such as automobile manufacturing and home appliances.

The global Hot-dip Aluminum-silicon Coated Steel market size was estimated at USD 4861.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
