Abstracts

Hot Melt Adhesive for textiles is a type of adhesive that is applied in a molten state and bonds to fabric surfaces upon cooling. Unlike traditional adhesives that require a solvent or chemical reaction to bond, hot melt adhesives use heat to soften and flow onto the material, creating a strong, durable bond once it cools. They are often used in textile manufacturing for tasks like lamination, coating, or assembling components like patches or trims. These adhesives offer advantages such as quick setting times, no need for drying, and minimal environmental impact since they don't release volatile organic compounds (VOCs).

The global Hot Melt Adhesive For Textiles market size was estimated at USD 2965.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
