Abstracts

Hot melt inkjet printers are a specialized subset of thermal inkjet technology that utilizes solid, wax-based inks which are heated to a molten state before being jetted onto a substrate, where they rapidly cool and solidify to form durable, vibrant, and highly opaque prints. This process distinguishes them from conventional aqueous or solvent-based inkjet systems, as it enables printing on a diverse range of non-porous and challenging surfaces?including plastics, metals, ceramics, and flexible packaging materials?without the need for pre-treatment or extended drying times. The resulting prints exhibit strong adhesion, water resistance, and excellent color saturation, making this technology particularly valuable in industrial coding, product marking, direct-to-shape printing, and customized packaging applications where durability and material compatibility are critical.

The global Hot Melt Inkjet Printer market size was estimated at USD 120.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.15% during the forecast period.
