Abstracts

Hot rolled steel sheet is a flat-rolled steel product manufactured through a process in which steel slabs are heated above their recrystallization temperature (typically above 1,700°F) and passed through a series of rollers to achieve the desired thickness, resulting in a scaled surface finish and less precise dimensional tolerances compared to cold-rolled alternatives. It is characterized by its malleability, strength, and relatively low cost, making it suitable for applications where precise shapes and surface finish are not critical, such as in structural components (e.g., I-beams, channels), automotive frames, railroad tracks, agricultural equipment, and construction machinery. The product is typically supplied in coils or cut-to-length sheets and is available in various grades and thicknesses to meet specific mechanical and chemical property requirements dictated by end-use industries.

The global Hot Rolled Steel Sheet market size was estimated at USD 410500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
