## Abstracts

Hot stamping die steel refers to a specialized category of tool steel designed to withstand the extreme thermal and mechanical stresses encountered in hot stamping processes, where heated metal blanks?typically boron steel?are formed into complex shapes under high pressure; these steels must exhibit exceptional resistance to thermal fatigue, high-temperature strength, wear, and oxidation, often achieved through alloying elements like chromium, molybdenum, and vanadium, and are critical in producing lightweight, high-strength components for industries such as automotive manufacturing. The market for hot stamping die steel is driven by the growing demand for fuel-efficient vehicles, which rely on hot-stamped parts for safety and weight reduction, alongside advancements in die design and steel metallurgy that enhance durability and production efficiency.

The global Hot Stamping Die Steel market size was estimated at USD 785.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
