Abstracts

Hot Tapping and Plugging Services are specialized industrial services that allow for tapping, branching, maintenance isolation, or plugging of in-service pipelines without interrupting production. They are applicable to continuously operating systems such as oil, gas, chemical, district heating, water supply and drainage, and power plant networks. Their core value lies in completing structural modifications without interrupting flow or depressurization, avoiding economic losses from downtime, thus being considered a highly reliable specialized engineering service. The service process typically relies on specialized equipment (tap machines, plugging heads, and adapter clamps), high-strength steel components, seals, and pressure control systems, and requires a certified technical team to execute the service. Global project scale continues to grow due to factors such as oil and gas pipeline maintenance cycles, urban underground utility tunnel construction, and the renovation of aging industrial facilities. The high risk and high technical barriers create strong professional barriers, leading to intense competition among companies in the industry regarding tool modularity, plugging reliability, cross-pressure level operation capabilities, and emergency response speed.

The global Hot Tapping and Plugging Services market size was estimated at USD 1009.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
