Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hot Vulcanizing Adhesive Glue competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Hot-vulcanized mortar is a rubber adhesive that forms a cross-linked structure through a heated vulcanization reaction. It has excellent wear resistance, heat resistance and bonding strength. It is widely used in conveyor belt joints, rubber product repairs and industrial equipment linings. Global sales in 2024 will be approximately 0.38 million tons, with an average unit price of approximately US\$2100 per ton. Upstream suppliers mainly include natural rubber, synthetic rubber and vulcanizer manufacturers, while downstream customers are concentrated in mining, metallurgy, automobiles, building materials, energy and chemical industries. In 2024, driven by the demand for high-performance tires, hydraulic hoses and new energy vehicle seals, the hot-vulcanized mortar market will show a differentiated pattern of "high-end price increases and low-end surpluses": European, American and Japanese giants Lord, Henkel and Chemlok will continue to monopolize high-temperature and coolant-resistant formulas, with unit prices maintained at US\$30-35/kg. Domestic manufacturers have reduced costs to US\$15-18/kg through the phenolic-epoxy-silane ternary modification system, and have captured a 30% market share in the semi-steel radial tire and industrial conveyor belt fields; upstream specialty resins and coupling agents are still dependent on imports, resulting in limited production expansion for domestic small and medium-sized factories, while downstream leading tire manufacturers are working with material suppliers to develop intelligent mortars with low-temperature rapid vulcanization and online viscosity monitoring. It is expected that the solvent-free spraying process will be the first to be mass-produced in new energy heavy-duty truck all-steel tires in 2025. At that time, suppliers with formula iteration and process package capabilities will receive a

premium, and industry concentration is expected to increase from the current CR5=55% to 70%.

The global Hot Vulcanizing Adhesive Glue market size was estimated at USD 798.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
