### Report Overview:

Housewrap (or house wrap) generally denotes a synthetic material used to protect buildings. Housewrap functions as a weather-resistant barrier, preventing rain from getting into the wall assembly while allowing water vapor to pass to the exterior. If moisture from either direction is allowed to build up within stud or cavity walls, mold and rot can set in and fiberglass or cellulose insulation will lose its R-value due to heat-conducting moisture. House wrap may also serve as an air barrier if it is sealed carefully at seams.

The Global House Wraps Market Size was estimated at USD 4236.32 million in 2023 and is projected to reach USD 5485.19 million by 2029, exhibiting a CAGR of 4.40% during the forecast period.
