Report Overview

Household condensing wall mounted boiler is a hot water boiler equipment used for household heating and hot water. It adopts condensation technology, which can fully utilize the heat generated by gas combustion, improve energy utilization efficiency, and reduce energy waste. The working principle of a condensing wall mounted furnace is: gas is burned in the combustion chamber to generate heat, and the flue gas is discharged through the flue. At the same time, a condenser is installed inside the flue gas to condense the water vapor in the flue gas into liquid water, releasing additional heat. In this way, the condensing wall mounted furnace can provide more heat during the combustion process while reducing smoke emissions.

The global Household Condensing Wall-Mounted Furnace market size was estimated at USD 489.70 million in 2023 and is projected to reach USD 923.27 million by 2032, exhibiting a CAGR of 7.30% during the forecast period.
