Report Overview

A hub assembly bearing is a crucial part of the wheel assembly that connects the wheel and the axle. It is a set of steel balls (ball bearings) or tapers (tapered bearings), held together by a metal ring. It enables the wheel to rotate smoothly with a minimum of friction. One side of the bearing rotates with the wheel while the other side is fixed to the suspension. The rolling elements in bearings carry vehicle load and ensure minimal-friction rotation between the inner and outer races.
