Abstracts

The HUD free-form surface cold light mirror is the core optical component in the head-up display. It adopts an asymmetric free-form surface design to expand the field of view and correct image distortion. Its surface is coated with a special cold light film layer, which can efficiently reflect visible light while transmitting non-essential bands such as infrared light, significantly reducing the system's thermal load and energy consumption. This technology combines high optical precision and heat dissipation advantages, and is widely used in automotive AR-HUD and aviation fields. It can still maintain high-contrast display in strong light environments and extend equipment life.

The global HUD Free-form Surface Cold Light Mirror market size was estimated at USD 68.8 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.20% during the forecast period.
